

Flooring and Carpet Manufacturer, Dalton, GA

...thanks to the Power Breezer cooling fans, the oven and its contents could be cooled down to under 200°F in approximately 15 minutes.

PROFILE

Ever since this Company rolled out its first carpets in 1878, it has built quality into every flooring product made. It continues that tradition with revolutionary product innovation, award-winning design, and a talented team dedicated to outstanding service. A recognized leader in the flooring industry, the company is proud to assemble 100% of its carpet products in the United States.

PROBLEM

As part of the Company's manufacturing process, dies are heated to 900°F to clean them—much like the cleaning cycle of an oven. The cooling time necessary to cool down the dies to under 200°F was more than two hours. Only then could the workers handle the dies, cool them with water, and assemble them for further use. This delay caused idle down-time which was costing the Company time and money.

SOLUTION

The Plant Managers decided to give [Power Breezer](#) cooling fans from Breezer Mobile Cooling a try. In an effort to speed up the lengthy cool-down process, Power Breezer cooling fans were [placed near the oven](#).

RESULTS

The Plant Managers were pleased to find out that thanks to the [Power Breezer](#) cooling fans, the oven and its contents could be cooled down to under 200°F in approximately 15 minutes. The process cooling time was shortened, which resulted in higher efficiency and greater output.
