Everyone Deserves to Be Cool®

Finally, A Cooling System Designed for Dock Doors

THE PROBLEM:

Trailers are ovens radiating heat with temps as high as 120°F, causing extreme worker fatigue – impacting both your productivity and profitability. On average, the cost of heat for an employee working in a trailer is 3 times that of other warehouse workers. Until now, there has been no good solution to mitigate heat in trailers.

THE SOLUTION:

Power Breezer Sky – an Intelligent technology designed to effectively cool where no one else can and significantly increase user productivity and team morale.

It more than pays for itself and features: atomized jet stream cooling keeps employees cool; rugged construction is time-tested and already adopted by Fortune 500 companies and the U.S. Military; an intelligent system with cutting edge sensors adapts to any environment; autonomous mode provides controlled, adaptable cooling with no user input
